

November 2017 Sky Events – the Planets

Close Conjunction of Venus and Jupiter

On the morning of **Monday, November 13th about 6:00 a.m.**, find the bright planets Venus and Jupiter located low on the east-southeast horizon in the constellation Virgo, separated by just $\frac{1}{4}$ degree!

A telescope at medium-power will help distinguish these two planetary disks.

On this morning, Venus lies **153 million miles** from the Earth, while Jupiter sits some **959 million miles** away!
