Looking Southwest

On the evenings of **Sunday, November 19th through Tuesday the 21st** about **6:00 p.m.**, the waxing crescent Moon will join Saturn and Mercury in the southwest skies.

Binoculars and a low view to the horizon may be necessary to sight these celestial objects through twilight's glow.

On these evenings, Mercury is some **101 million miles** behind the Moon and Saturn is over **1 billion miles** away!
