

March 2019 Highlight

The Vernal Equinox – March 20th

- ★ On **Monday, March 20th**, at 5:58 p.m. EDT, the Sun begins its journey north of the celestial equator, bringing spring to the northern hemisphere and autumn to the southern hemisphere.
- ★ This event is called the “**vernal equinox**” in the northern hemisphere, when plants are beginning to “green.”
- ★ On this day all places on Earth experience nearly equal amounts of daylight and darkness – about 12 hours of each. “**Equinox**” literally means “**equal night**.”
- ★ For all places on Earth at the equinox, the Sun rises due east and sets due west.
