

**Tracy Drain** is a Flight Systems Engineer working at NASA's Jet Propulsion Laboratory. Her passion for space grew from an early love of science fiction – she soaked up Star Trek, Star Wars, and Battlestar Galactica, and sci-fi books by the armload. She earned degrees in Mechanical Engineering at the University of Kentucky and Georgia Tech, and she was hired at JPL in 2000. In her 21 years at the lab, she participated in the development and operation of the Mars Reconnaissance Orbiter (a science/relay orbiter at Mars), the Kepler mission (an exoplanet hunter), the Juno mission to Jupiter and the Psyche mission (to study an asteroid). She is now the Lead Flight Systems Engineer for the Europa Clipper mission. Tracy relishes being on the forefront of space exploration and loves sharing her passion for space with people of all ages.
