

The 2022 Orionid Meteor Shower Peaks on October 20-21

The annual Orionid meteor shower occurs as a result of the Earth orbiting through the debris path of Halley's comet. This year's meteor shower will occur, for the most part, without bright moonlight – providing some dark viewing conditions. Find out more about the 2022 Orionid meteor shower at [this link](#), and learn more about the nature of meteors and meteor showers at [this link](#).
