

Day will turn to night!

About 3:15 p.m. EDT on April 8, 2024

The sky will not be this dark!

During the brief few minutes of totality, you should be able to see the brighter stars, like Rigel and Betelgeuse (in the constellation Orion), and all 7 other Solar System planets: Venus, Mars, Saturn, and Neptune on the Sun's morning side, and Mercury, Jupiter, and Uranus on the Sun's evening side. **The Sun will be in the constellation Pisces.**
