

December 2025 Sky Events

The Thursday night, December 4/5, Full “Long Night Moon”

The final full Moon of the year occurs on Thursday night, December 4/5. With the winter upon us, the nights are longest, and the days are becoming colder. That makes the names for December’s full Moon most appropriate and meaningful.

This December Full Moon, that will brighten our skies from dusk to dawn, is also known as the **“Cold Moon”** and the **“Moon Before Yule”**.
